GE DIGITAL ENERGY PRODUCTS

UNINTERRUPTIBLE POWER SUPPLIES

On behalf of GE Digital Energy & iOpen Pty Ltd, I am pleased to inform you that iOpen & GE Digital Energy have established a long term strategic partnership to provide today's businesses a complete portfolio of critical power protection products and services.

This partnership brings to our customers the strengths of a nationally based company with over 10 years involvement within the electrical contracting and electrical wholesale industries.

Bringing together years of experience in power quality products, and a company who has lead the way in innovative technologies and quality initiatives.

GE Digital Energy offers a large range of UPS power solutions from 350VA to 4MVA with General Electrics own advanced technologies such as: -

- **RPA™ Redundant Parallel Architecture**
High reliability UPS cluster with no single point of failure
- **SEM™ Super ECO Mode**
Saving Energy whilst maintaining high protection level
- **IEM™ Intelligent Energy Management**
Award winning concept for energy savings

Efficient, cost effective products with lower operating costs.

These features coupled with GE's world renowned quality systems, service and business ethics provide a solid base to bring to you products for all of your critical power needs.

Should you have such an application, please call iOpen on **02 9543 3611** to discuss your available options such as a power audit and / or assistance in the choice of the most suitable UPS for your application.

Yours faithfully,
Peter Stephenson

Regional Manager (Australia & New Zealand)
